

ActiveState

Enterprise Edition

ActivePerl, ActivePython, ActiveTcl

There's an element of risk that goes along with using open source software in mission-critical applications. Whether you have a banking application, military system, or network management solution, problems with languages may mean wasted development time or system breakdowns.

ActiveState Enterprise Edition subscriptions give you quality-assured, standardized, risk-free Perl, Python and Tcl to save time in your development. You get enterprise-grade language builds, priority access to technical support, expert guidance, and indemnification. With ActiveState, you'll enjoy all the advantages of open source while speeding up development and reducing risk.

Get Products to Market Quickly

Feeling the pressure to meet development deadlines? Start with a standardized language across all your platforms to save you time during your design phase. Don't let your developers waste precious time on compiling language components from community sources to make them compatible with your environment. Focus your teams on their core competencies and leave the language building and testing to us.

Deploy mission-critical applications with confidence knowing your ActiveState Enterprise distribution is fully tested and quality-assured by core Perl, Python and Tcl developers. We compile with popular modules on the operating systems you need, and continually test for security, stability and quality. When your team is on tight deadlines, build once and deploy with the assurance that the language you use for prototyping will work in your production environments. With Enterprise Edition, you get the world's highest quality dynamic language distributions, no matter what platform you're running.

Ensure Maximum Uptime

Eliminate downtime with on-demand technical support from ActiveState experts. From troubleshooting to emergency in-production coverage, you get priority access to Perl, Python and Tcl experts to ensure your applications are efficient, powerful and reliable. We'll support your team with unlimited incidents, priority access, fast response times and fixes delivered quickly when you need them. In addition, you'll get to market faster with access to best practices advice and how-to guidance in areas such as module usage, database connectivity, and code troubleshooting.

Enterprise Edition guaranteed support response times ensure your mission-critical systems are always up:

- » Critical Impact issues – 2 hours
- » Severe Impact issues – 4 hours
- » Minor Impact issues – 1 day

“Since the beginning we’ve been satisfied with the results, and have found ActivePerl to be robust and reliable ever since.”

Scott Baxter

Director of Software Development, Finisar

“Not only is it reliable, scalable and enterprise-ready, ActivePerl saves CA development time and dollars.”

Lawrence Backman

Vice President, CA

ActiveState

Enterprise Edition

ActivePerl, ActivePython, ActiveTcl

Save Time with Standardization & Compatibility

Perl, Python, and Tcl are available from many different sources, but different versions, modules, and compatibility across operating systems, frameworks, and databases can cause problems and waste development time. To meet the demands of cross-platform environments, we build, support and maintain ActivePerl, ActivePython, and ActiveTcl across a wide variety of operating systems, including Windows, Linux, Mac OS X, Solaris, AIX and HP-UX. To ensure compatibility within your development and production environments, we also build, manage, and test on these 6 operating systems with 16 architectures for the latest versions and modules:

- » **ActivePerl:** 4 current releases, plus over 10,000 Perl modules
- » **ActivePython:** 3 current releases, plus over 7,000 Python packages
- » **ActiveTcl:** 3 current releases, plus over 700 Tcl modules

Keep Intellectual Property Safe

Don't expose private development issues in public community forums. Resolve problems quickly with a private, technical specialist at ActiveState to ensure that your business or operation runs without interruption. Enterprise subscriptions include code reviews, audits, and development guidance to help you eliminate problems and ensure code efficiency, while keeping IP safe.

Mitigate Legal Risk

Embedding Perl, Python or Tcl in your application can leave your organization vulnerable to costly and embarrassing legal action. Protect your organization from legal risk with ActiveState's indemnification coverage that guards you from potential copyright/IP infringement lawsuits. Enjoy peace of mind knowing our indemnification coverage protects your organization and intellectual property.

Comply with Open Source Support Requirements

Given the low cost of acquiring open source components, more organizations are open source components in enterprise applications. As such, some government agencies, financial institutions and large enterprises are making commercially supported open source mandatory. Enterprise Edition subscriptions provide enterprise-grade support so you can deploy with confidence knowing you comply with company and industry open source policies.

Contact us today to speed up your development with dynamic languages and get to market faster with minimized legal risk.

ActiveState
The Dynamic Language Experts

About ActiveState

ActiveState is the world leader in enabling companies to develop, manage, and distribute applications with dynamic languages. The company's products and services for Perl, Python, Tcl and other web languages, are used by over 2 million developers and 97% of the Fortune 1000 to build and run applications from mission-critical to open source projects. ActiveState's end-to-end solutions include development tools, language distributions, indemnification, OEM solutions, support and other services. With these, customers such as Cisco, CA, HP, Bank of America, Siemens, and Lockheed Martin are able to accelerate productivity, minimize risk, and ensure compliance.
